

Efficiency instead of risk

Optimize your document-processes with the iPoint Value Chain Agent

The situation:

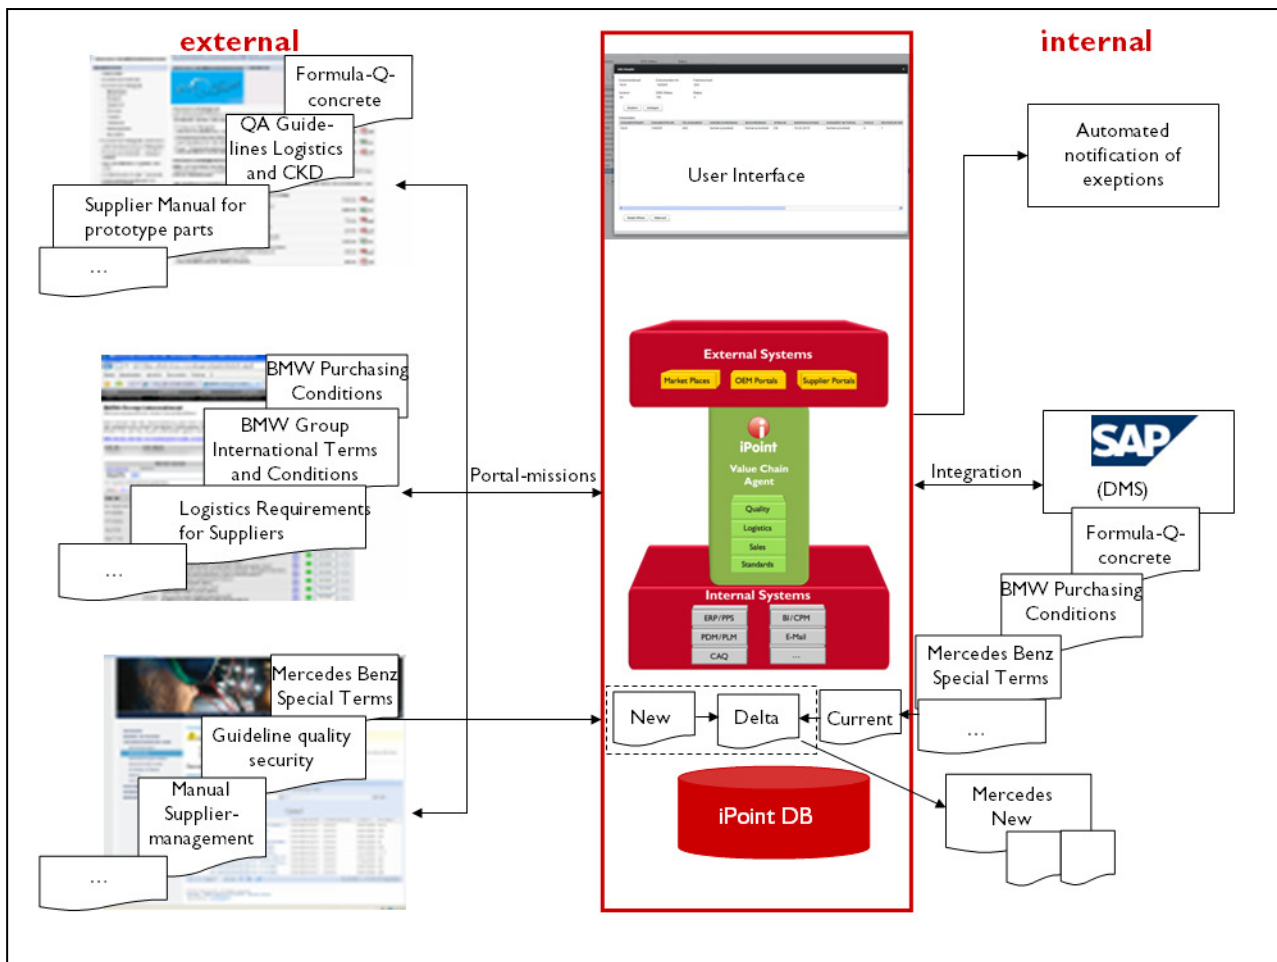

Did you know? There are an increasing number of different documents like for example customer specific standards, legal binding documents or DIN-regulations. A large number are available on internet portals and suppliers need to make sure that they produce and deliver according to current customer standards or specifications. **Waste of time!** In addition documents are changing on a regular basis of which they then have to be re-evaluated.

The solution:

With the iPoint Value Chain Agent and the document integration for legal binding documents, this task is automated. The external provided documents are synchronized automatically into the internal document-management-system. If there are changes in the version of the monitored document or even a new one available in the internet portal, then an automated download is performed and compared with the current document saved.

All changes are visually marked in a form of a delta document. The new document and the delta document are then stored automatically as the new version in the document-management-system. At the same time, this new version automatically receives additional information from the portal - like revision status and document name.

The end results deliver less manual effort in searching for all the necessary changes and the responsible person is now able to compare the current document easily by using the delta document and determine if there are changes to the document prior to release. This ensures that your company **always works with the latest documents.**

Process document integration

Test No.	Service or Band	Frequency MHz	PK			QP			B1	
			Limit			BW kHz	Limit			
			dB (µV)				dB (µV)			
			class				class			
3	4	5	3	4	5					
Basic limit										
B1		0,28 ... 0,52	100 - 59,51			120	-			.
B2		0,52 ... 108 ^p	84			120	-			.
Broadcast										
1	125 kHz	0,1 ... 0,15	93	83	73	9	-	-	-	.
2	LW ^{b)}	0,15 ... 0,28	90	80	70	9	77	67	57	€
3	MW ^{b)}	0,52 ... 1,73	70	62	54	9	57	49	41	€

Result of a full automatically document compare

Your benefit:

Increase of efficiency:

- Fully automated portal monitoring
- Integrated compare old/new due to the document compare function
- Changes old/new are marked by the system
- Fully automated integration into the document-management-system
- Immediate notification to the defined mailing list, controlling the release workflow

Risk minimization:

- Documents are always sighted and gathered in time by the iPoint Value Chain Agent – **even if there are changes in the portals!**
- New clauses or phrases are marked automatically
- Consistently filing inclusive meta-data
- **Company-wide availability** of the latest documents is always guaranteed
- Documented process – important for certifications and audits!
- Legal security to the customer
- Direct involvement in the PDM-process possible

Monitoring of documents from the following portals:

- VW Group Supply.com
- Global Daimler Supplier Portal
- Chrysler Global Supplier Portal
- BMW Group Partner Portal
- Ford Supplier Portal (Covisint)
- Volvo Corporate Standards
- GM SupplyPower
- Harley-Davidson Supplier Network
- Honda Supply Team
- Lear Common Web Access Applications System (CWAAS)
- PSA-SUPPLIERS
- TRW - Vendor Information Network
- Plant Standards MAN Commercial Vehicle AG

The advantages at a glance:

- > Increase of efficiency through data- and process integration
- > Greater process reliability through automatisisation
- > Shorter process times as well as relief of the resources
- > Full integration to document-management-systems like e.g. SAP DMS
- > Full support of status networks and workflows
- > Audit-secure as well as documented processes
